

FIBER OPTIC REFLECTANCE FIXTURE

PART NUMBER: SF-SMA/SMA

Features:

- Uses our standard focusing probes
- Fixed incident angles for specular included and specular excluded reflectance measurements
- Very small size
- Rugged aluminum housing
- Black anodized finish to reduce stray reflections

Our FIBER OPTIC REFLECTANCE PROBE is specially designed for process control applications where a reliable, rugged fiber to probe system is required to project or capture light. The probe uses our focusing lens probes to maximize light throughput over a 400 nm to 1100 nm range.

The housing is constructed of aluminum anodized black to prevent internal reflections from affecting measurements. The fixture has fixed ports at normal incidence and 45 degree incidence for both specular included reflectance and specular excluded reflectance measurements, respectively.
